

POWER GOLF®

Message from POWER GOLF®

Press Release 12.04.2023

Time to renovate your indoor and outdoor range offerings. Providing golfers with both an indoor and outdoor option, alongside industry leading ball tracking technology, is mandatory for golf practice, present day.

Compared to the traditional round of golf, high-tech driving ranges provide golfers with a competitive experience in a much shorter timeframe. Pair your next indoor or outdoor range renovation with **POWER GOLF®** and the industry leading ball tracking technology, for an experience that is next level. We aren't practicing golf at the driving range as we play on the course. **Golf is not flat.** Aside from 18 tee boxes, nearly all shots on a golf course will include some degree of slope, requiring necessary adjustment.

POWER GOLF® allows golfers of all skill levels the **experience of an uneven lie in all directions**, revolutionizing the way we practice golf at the touch of a button. Shots where the ball is above, below, or on side hill lies are the most difficult to execute, mainly because they are the least practiced. To practice these shots, a golfer would need to visit multiple locations throughout a golf course or would need to visit multiple uneven areas at the practice range. **With POWER GOLF® any lie can be practiced at the push of a button.** POWER GOLF® comes fully loaded with state-of-the-art technology including a wireless tablet, LED touchscreen on-deck display, Bluetooth, Wi-Fi, standard AC power connection, rechargeable batteries also included. All electrical or programmable components of the platform meet CE certification for outdoor use of machinery & equipment.

The company obtained a USPTO Registered Trademark on 9/7/2021 and filed a patent on 7/1/2020. The company plans to unveil their mass production platform at the 2024 PGA Show.

Practice How You Play. Better Practice, Better Golf, POWER GOLF®.
