

USWING MOJING COMPANY INTRODUCTION

Uswing Mojing is the world's first designed & developed sunglasses for professional golfing.

Resist reflection and glare, filter 100% ultraviolet rays, protect golfers' eyes in all directions, and make the data collected by the eyes accurate, so that the green slope and grass pattern can be read more accurately.

The lens has scientific patent technology, combines the of optics, chemistry, physics, golf function and ergonomics scientific and technological, and adds a unique anti-blue light nano-level factor, which can effectively filter harmful blue light and significantly improve the degree of colour reproduction.

Since its launch, Uswing has been well received by professional players at home and abroad, such as Phil Mickelson, CT Pan, Rose Zhang etc.

INTRODUCTION OF THE FOUNDER OF THE COMPANY:

Mr Warren Foong, the founder of the brand, is an avid golf enthusiast. He has an amazing record of playing at most 300 rounds a year.

He is in love with golf and is also worried that playing under the hot sun will hurt his eyes for a long time.

After trying all the sunglasses, he found that none of the products on the market really met the core functions required for wearing in golf: No parallax and it helps to read the green accurately.

He found that the world's top players also faced the same problem: in the golf equipment market, there is no pair of sunglasses that are really suitable for this sport.

Under the leadership of Mr Foong, the world's first Uswing Mojing Sunglasses was born. Since the day of its establishment, Uswing Magic Mojing has been actively involved in eye protection projects, popularizing the concept of eye protection among young and child players, and has also reached long-term charitable cooperation with the international ophthalmology charity Orbis and the China Health Express Foundation, dedicated to helping the disadvantaged in China.
